

Funnels (Class Number 6065)

A FM Approved drum funnel is safer with ignitable liquids. One funnel has a double wall section and flame arrester which allows safe drum venting while the barrel is being filled with thin (flammable) liquids. Another funnel, for use with (flammable) viscous liquids, has a bung funnel extension which nearly reaches the bottom of the drum. The threaded funnel base has a flame arrester which allows breathing from drum interior to atmosphere. This funnel requires the drum liquid to be of sufficient depth to cover the end of the funnel so that the lower end of the extension is sealed off from the drum exterior.

Models 08203, 08214

Models 08203 and 08214 Tipover Funnel Kits for drums with standard 2 in. NPS bung fitting.

Company Name:	Justrite Mfg. Co. LLC
Company Address:	3921 Dewitt Ave, Mattoon, Illinois 62938, USA
